

Watch your Wake

Where and how you operate your boat can help McGregor Lake residents and visitors preserve the shoreline and improve safety for everyone

Boating can be enjoyed, and wakes controlled, by operating your boat in a flat position

Flat means bow down!

- operating your boat at slow, almost idle speed, is a great way to cruise and enjoy the beauty of the lake in a natural flat-boat position
- the channel between Mud Bay and McGregor Lake is an environmentally sensitive area where boat speed is restricted to idle speed only
- when operating your boat at faster speeds use your engine to get your boat into a flat, or plane position, as rapidly as is safe, then maintain this flat position
- boats designed or driven to produce large wakes should avoid operating their boats in wake-producing mode in channels and narrower areas of the lake as these wakes destroy the shoreline, damage docks and moored boats and have the potential in these smaller areas to create unsafe boating and swimming conditions

Be smart, be courteous and enjoy the lake, but -
Watch your wake!
